HUBER Solution GreyUse® for Reuse of Grey Water

Grey water is defined as domestic wastewater that does not contain faecal matter. At large buildings, such as hotels, there are two options for treatment and reuse: either of combined wastewater or of separately collected grey water.

Grey water from bathrooms, kitchens and laundry rooms is only moderately polluted in comparison with black water from toilets and urinals. It contains far less solids, germs and nutrients. Its treatment is far easier. By reduced fresh water consumption and wastewater disposal, economical as well as environmental benefits are achieved.

Примеры из практики
